

## **Biodiversity**

ESC members used **google lens** to identify species found in WGS and created a physical biodiversity trail. Due to Covid-19 SMMS, visitors do not get the chance to visit the school to tour around our school. As such, our members keep up with technology and learn **Virtual Reality (VR) skills** where they document the physical biodiversity trail into VR where visitors can visit anywhere, anytime without compromising safe management measures. A sneak peak of the VR tour created by the ESC members can be viewed at the link below.
