

## Learning Journeys and Events

We have exciting learning journeys where students get to play and carry out meaningful work. We organize kayaking as our post exam activities where students get the chance to kayak along Singapore River and clean up the river by picking up litter as they kayak down the stream.

Our learning journey also includes visits to Marina Barrage to learn about Singapore's Reservoir and Water conservation. Renewable energy system was also introduced to keep us updated about new technology to achieve clean and sustainable energy consumption in Singapore.

Lastly, our ESC members have the opportunities to build up their confidence in public speaking skills where they spread awareness and present their Science and Environmental knowledge to the members of the public. This includes carrying out mini upcycling sessions to teach them how to play a part to conserve the environment by converting unwanted materials to useful products.
